

Assignment - Configure MySQL

Assignment

- Create a local MySQL instance for use in this course
 - MySQL can be installed natively or in a Docker container - your choice
- Setup two databases. One for dev, one for prod
 - Call databases sfg_dev and sfg_prod

Assignment

- Using the MySQL root user is NOT a good practice.
- Major security risk!!!
- Best practice is to create accounts with the minimum authority required

Assignment

- Create two accounts, one for dev, one for prod
 - sfg_dev_user, sfg_prod_user
- Both should have DML access (basic CRUD) to their respective databases
- Neither should have DDL access

Assignment

- SQL Scripts are available in GitHub. See course resources for the links to the proper branch.
- Next video will be a step by step review of the database configuration
